Brainstorm!: The Stories Of Twenty American Kid Inventors

Synopsis

Inspiring young inventors, from ages 5 to 19 Of the thousands of inventions filed each year since 1790 with the United States Patent Office, some have come from enterprising kids, and not just those who have grown up to be famous adult inventors. Here are the stories of twenty ingenious young Americans. Among them are Chester Greenwood, creator of ear muffs; Ralph Samuelson, originator of water-skiing; Vanessa Hess and her colored car wax; and Jerrald Spencer, whose electronic gizmo has made a line of toys so popular that over five million of them have been sold!

Customer Reviews

Grade 5-9?Brainstorm features young inventors from colonial to modern times and includes women and minorities. The ideas range from a safety device for power looms to the Popsicle, invented by an 11-year-old boy in 1905. Many inventors in this book started their careers as children and some held patents while still in their teens. Others did not receive their first patent until they were older and were able to raise the money necessary to fund the patenting process. The last chapter explains that process and gives advice on ways to save money on searches. Black-and-white photographs and pen-and-ink drawings show the inventor and/or their inventions. A useful book for encouraging self-expression and the creative process.?Margaret M. Hagel, Norfolk Public Library System, VA Copyright 1995 Reed Business Information, Inc. --This text refers to an out of print or unavailable edition of this title.

Ever eaten a Popsicle, kept your ears warm with earmuffs or resealed your breakfast cereal with the built-in cardboard tab on the box top? Thank a kid inventor, because all those things, and quite a few more described in this book, were invented by children. A great inspiration for your own young scientist. --This text refers to an out of print or unavailable edition of this title.

Perfect condition

Completely satisfied.

This book was purchased to work on a school project involving names of inventors. It was very useful and turned out to be a great purchase for other projects!

I use this book for the boys book club and it really encourages them to be creative and plan for their futures.

Reason for Reading: Came with our history curriculum. Read aloud to my ds, a biography at a time over a period of time. A collection of short biographies featuring kid inventors, focusing on what they invented and how it came to be. Includes such inventions as earmuffs, coloured car wax, the Popsicle, water skis, resealable cereal box tops and others. Neither of us was particularly thrilled with this book. The inventions I've mentioned above were the ones that ds enjoyed most. A lot of the other inventions were things he couldn't care less about like tufted bedspreads or couldn't relate to such as the rotary steam engine. Ds was keen when I started reading a story about a real kid (an 8yo or a 13yo) but some of these bios are about 17 or 18 year old's and that is pushing it a bit for a 10yo to consider a kid. Then some bios often were about how the inventor got the idea as a kid but didn't bring it to fruition until they were an adult which I think is cheating in regards to the title of the book. Also any mechanical or engineering inventions such as the electrical TV and the rotary steam engine were very detailed with scientific specifics which made the 10 yo's eyes glaze over. By the time we got to the last 5 stories he was begging me not to read the book anymore so I read them quickly in bed one night to if they were worth trudging through and I couldn't find any reason he needed to hear them so we ended the read-aloud there. I wouldn't recommend the book.

A great read for my youngest son who finds all little known facts interesting. The book is easy to follow & is interesting for parents & kids!

Brainstorm! is a great book about child inventors. Children in grades 3 through 6 will enjoy it. Each chapter -- averaging 2 to 5 pages -- focuses on a child and his or her inventions. There are plenty of female inventors, and the book includes some inventions that are modest as well as ground-breaking. This book will inspire children to have confidence in their ideas.

This book allowed me relate stories of kid inventors to my classroom students. These stories were easy for them to relate to and showed them that we value their ideas and contributions. They can be used to inspire the next generation of kid inventors.
