Customer Reviews

Alan N. McClain is a paralegal and a former management systems analyst in some of America's most famous computer and aviation companies, having written many original management operating manuals spanning over 15 years, which led to his work as a traveling author and consultant. His wide experience in so many fields led to the devoted research invested in this book and the ways to beat macular degeneration in the early stages.

I think the author did a wonderful job in explaining his experience with this disease. The diet plan is easy to follow and certainly seems timely to me as I am now 73 years old. I found that by adding this diet to my daily routine, I have more energy to enjoy life. As reading consumes a large part of my day, I feel confident that by following the advice in this book I will be able to avoid Macular Degeneration. I would definitely recommend this book.

This book has become my bible for Eye Health!! After being diagnosed with a precursor to macular degeneration (drusen in my eyes), I read this book, and it gave me tools to follow to prevent further deterioration. Actually, I feel that EVERYONE should buy this book (especially everyone over age 50), because it offers valuable information about how to prevent eye disease. It also has given me support to know that I can control my eye health and not just wait for macular degeneration to come to me!! The information presented (foods to eat, foods to avoid, supplements to take, lifestyle changes) is good advice for health in general, and NOT just eye disease!! After I went to a retina specialist who told me not to worry, it might be 10 to 20 years before I get the disease, I thought that I wasn't going to just sit around and wait, when there are painless, scientific research based prevention techniques that I could do! This book has it all! The author, Alan N. McClain, provides a book of advocacy, support, and real ideas about how to keep your eye health, and prevent further damage. I highly recommend this book to everybody over the age of 50!!! I can't thank the author enough for such a wonderful guide that can help give my eyes many more years of good vision! Thank you, Alan!! Wonderful book that everyone should have on their bookshelf!!!

As a doctor of optometry, I find this a very comprehensive book with an easy and affordable daily regimen that can help to improve or even reverse macular degeneration in the early stages.

It's an easy read and somewhat informative. It has tips on nutrition, food preparation, and supplementation. However, the author goes off the track (perhaps to write a full book) about such things as food storage, removing ants from the house, etc. That's not why I purchased the book. I've read six books on the topic and my favorite is "Stop Vision Loss Now!" by Bruce Fife, N.D. btw, can't help noticing there are quite a few five-star reviews here that are NOT verified purchase. You be the judge.

Excellent first book from Alan N. McClain. Very well explained in a non-technical way, while still rich in useful information. It does not read as a medical book. It is easy to read, well thought out manuscript with lots of pertinent research applicable to MD and much more. I'm very glad to have come across it. Thank you!

Very ,very, very, good book. I am visually impaired and this book provides information that improves one sight. Healthy living is my choice and the information this book outlines is easy to understand . My thoughtsthis book is definably a winner in healthy living.

This is an excellent book, very well written, focusing on a proven regimen for building all-around strong health and applying doctor-recommended nutritional ways to minimize or even reverse macular degeneration when discovered in its early stages, or to avoid it completely.

Well researched information by the author. Got this book for my mom who is starting to have her vision impaired. Outstanding read and packed with very useful information for an all around healthier lifestyle.
