The Exploratorium in San Francisco is "a museum of science, art, and human perception founded in 1969 by physicist Frank Oppenheimer. The mission of the Exploratorium is to create innovative learning environments, programs, and tools for exploration that help people of all ages, origins, and geographic locations use their natural curiosity to learn about the world around them." And if you've ever been there, you know that this ambitious mission statement is fulfilled in spades. It is an extraordinary place that I try to visit every time I go to San Francisco. This delightful book allows you to create your own Exploratorium at home. It's got loads of experiments that, in the best Exploratorium tradition, are fun and highly educational (as an aside, by following one of the exercises, I was able to make a styrofoam airplane that looks suspiciously like the .com Books logo--and it flies!). Highly Recommended for the curious and playful of any age.

This book came in great condition, could've passed for brand new. Great projects with everyday pantry items. My kids loved the non-newtonian fluid project!

Not only does the book offer clear directions on science activities for kids, it also provides a simple explanation of the science behind each experiment. I have already gathered the supplies for doing the bubble experiments this 4th of July.

I worked for the summer program at the Boys and Girls Club. This book became very useful when doing science projects with them. They enjoyed the ones I did with them, especially the messy goo ones. It is also a great book to have at home to do fun activities with your children.

I ordered several books to prepare for the experiments I wanted to present for the "Bring Your Kids to Work" Day. This was, by far, the most useful and most interesting book I received. You can use the experiments listed in the book, and tailor them for younger or older children very easily. I'm going to order the sequel, "Science Explorer, Out and About," today!

Many science experiment books out there either have bad science in them, poorly designed experiments, or unclear directions (or, unfortunately, all three). This book has great experiments that are easy and fun to do. And, the science behind the experiments is accurate and clearly explained. As a scientist, science teacher, and parent, this book is the first one my list of recommendations!

I am an elementary school teacher and the mother of three young children so I have read a lot of books that say they are filled with easy-to-do science experiments but this is by far the best of its kind that I have read. Within the first two hours my kids and I did three of the experiments AND had a great time together AND learned something!
