Using a to-the-point, reader friendly approach, *Introduction to Critical Care Nursing, 5th Edition*, provides authoritative, real-world information on the important concepts of critical care nursing and the assessment and technical skills associated with the management of critically ill patients. The latest content on the technology makes it easy to learn and understand how to use the equipment youâ™ll use in the field. Nursing care chapters are organized according to the nursing process framework, and youâ™ll find detailed nursing care plans in every management chapter. Case studies and critical thinking questions challenge you to apply what youâ™ve learned, and user-friendly features throughout the text (updated pharmacology tables, clinical and laboratory alerts, and evidence-based practice boxes) help you bridge the gap between concepts and clinical practice. Nursing Care Plans provide nursing diagnoses, expected patient outcomes, and interventions with rationales to prepare you for clinical practice. Streamlined and updated Pharmacology Tables detail the actions, indications, dosages and routes, and side effects of commonly used critical care drugs. Clinical Alerts promote optimal patient safety and outcomes by highlighting potential problems and concerns in the clinical setting. Laboratory Alerts discuss both common and cutting-edge tests and procedures, emphasizing the importance of laboratory test results to critical nursing care. Critical Thinking Questions in every chapter encourage you to use and reinforce the concepts presented throughout the chapter. Now full-color throughout, new, vibrant artwork and anatomical images are in true-to-life color. A new chapter on end-of-life care covers ethical and legal matters, palliative care, withholding of therapies, and communication issues â• all essential concerns confronting todayâ™s critical care nurse. New features on evidence-based practice, genetics, transplantation, and geriatric considerations offer realistic, easy-to-understand information on some of the most important and rapidly changing topics in critical care today.

Customer Reviews

"Comprehensive and well laid out, it takes an in-depth approach to the fundamental concepts and tools for critical care nursing." Nursing Standard, September 2009

Got this for my critical care semester and had to return the first book I received because the pages were falling out of the book after one or two times reading it. I am very careful with my books and after spending \$83.00, I would think it would last more than a week. I think they used the same glue that are on post it notes. Second book I got, lasted 3 weeks and is now just starting to fall apart. The sad part is I like the textbook and information. was great with the exchanges. Very efficient. My issue is with the product which I need for school. Caveat Emptor

I'm an RN student in my last semester of nursing school. This book was required by our instructors (I cannot understand why they didn't pick out a better text for us as they have in the past). I have purchased MANY textbooks thus far in the program, but I really dislike this book. There are WAY better textbooks that make the information much more understandable in a better organized format.

I am currently in my CC nursing class & using this book. I have read 4 chapters & I really like it. We have other reading on the same topics in our Med/Surg book & I find this book much more easier to read. I feel like I comprehend the material much better out of this book as well. There are great resources online through evolve. I really like the open-book tests. It tests your knowledge & makes for a great study tool. I would recommend the book for to help study for a CC nursing class.

Arrived timely--content of book is awesome! Exactly what I needed.

It really helped understand critical care nursing. I kept this book for reference even after graduating.

great condition

Thanks to Mary Lou Sole! I have a great encounter when I got through this book. I open my new whole page of knowledge as the nurse at bedside care. I feel more confident with my lecture in classroom too.

I would recommend this book for those interested in general Critical care nursing. It is not a bad or overly dry read and has the necessary amount of information to supplement many of the Med Surg text books when it comes to specific trauma injuries.
