Student Lab Notebook: 100 Spiral Bound Duplicate Pages(Package May Vary)

Synopsis

100 Carbonless duplicate pages sequentially numbered. Copy (bottom page) perforated. Fully laminated front and back cover. Back cover folds over to prevent bleed through between sets. Durable plastic coil spiral binding allows notebook to lie flat. Cover contains most up-to-date Periodic Table and general lab reference information. Table of Contents page and How to Keep a Laboratory Notebook guidelines included.

Book Information

Spiral-bound: 100 pages

Publisher: Hayden McNeil Publishing; 2016 edition (November 1, 2016)

Language: English

ISBN-10: 1930882742

ISBN-13: 978-1930882744

Product Dimensions: 0.8 x 9.2 x 11.2 inches

Shipping Weight: 1.6 pounds (View shipping rates and policies)

Average Customer Review: 4.6 out of 5 stars 419 customer reviews

Customer Reviews

Hayden-McNeil Student Laboratory Research Notebooks are the leading selling duplicating notebooks in the United States and Canada. They are adopted by more than 80% of the leading colleges and universities including every campus of the prestigious Ivy League beginning in the Fall of 2001. More copies of these notebooks are in use presently than the combined sales of the leading Organic and General Chemistry textbooks combined.

Developed by the leading publisher of this genre of duplicating laboratory notebooks. First introduced in 1992, the publisher has sold millions to date.

Great alternative to what was offered at my college campus's bookstore. Has everything needed for a carbon-copy lab notebook.

Great notebook, does the job, and definitely less expensive than the ones in the school store.

This is my third student lab notebook so far. I haven't been able to find any other lab notebook better than this or cheaper. The majority of the people in my lab classes also use this notebook. Buying from [redacted] gives it a bigger plus since it's much cheaper in price than the ones at school. The notebook is very durable, and the pages are easily ripped. Also, the pages are very good in quality and have the ability to absorb liquids without affecting too many other pages. There's also a divider or a separator that has a reference sheet and a periodic table. The only things that I hate about the notebook are that I always forget to use the divider to separate the pages and prevent the following carbon pages from also copying what I wrote, which isn't their fault, and the divider, itself. When you use more than 50 pages, the divider is folded in such a way that it presses up on the sheet that you're writing on. This leaves a gap between that page and the pages underneath the divider, which makes it hard to write and for things to be copied. In general, though, this is a great notebook, and they're the best ones that I know of.

Would be 5 stars if the back cover were designed a little better. After you get about half way through the lab book, the cover has to be held in place to prevent copying onto next pages towards the binding. (It folds over, so naturally, with less holding it up, it gets loose). But I would still prefer this over having to remove it each time I turn a page. And everyone in class loved my book because it was spyrell. I would maybe make the back more stiff so it could be used as a clipboard as well (this is lab after all) and maybe make multiple bend areas for the carbon stopper slide so it accombinates for the use of the book.

When you get to the end, the carbon copy stoppersucks, I used cardboard

Sometimes I had to write quite hard to get the transfer to happen, but overall this was very reliable and useful for my Biology lab class. I needed to turn in a copy of my notebook each class and this made it much easier. You should use the page marker (like a double folded page) to stop from having the carbon papers be wasted though. I don't think I would use this for general experimental notes but it was great for class.

I really like this notebook compared to the permanent bound one. There is only two things which annoyed me. The first thing is that the original copy that goes in front of the carbon copy isn't a perforated paper (the carbon copy is perforated however), I like having both of them perforated. And

the second thing is since I'm left handed my arm has to rest on the spiral bound part of the notebook when I work on my labs, but clearly this is out of their control. They should consider making a lab notebook that has the spiral bound part at the top.

Really great. Since it is spiral bound, you don't have the giant mass of pages you have to flip over the top. That is super nice since that keeps everything very compact. The back cover unfolds so that you can put it under the carbon copy so that it doesn't mark the next one. It is pretty much exactly like the ones that are sold at the University of Washington book store.
